

| Dates | Objectives |
|--------------------|---|
| Tuesday, March 27 | <ul style="list-style-type: none"> • Finalize front-end design concept. • Start developing database (MongoDB). |
| Wednesday, April 4 | <ul style="list-style-type: none"> • Complete front-end code |
| Friday, April 13 | <ul style="list-style-type: none"> • Complete database. • Sign-up, log-in/log-out and verification complete • Account management features completed. |
| Friday, April 20 | <ul style="list-style-type: none"> • Each module can run on its own with a few specifications undone |
| Tuesday, April 26 | <ul style="list-style-type: none"> • Pre-deadline. Working project, but with a few specifications undone. • All modules are connected. |
| Thursday, May 17 | <ul style="list-style-type: none"> • Final deadline. Complete working project. |

Questions:

- Upon signing-up, does the user need to verify his email before having further access to the site, or can he proceed to the site but having limited access while his account is still unverified?
- Can the organization proceed to signing-up despite having requirement deficiencies? (knowing that these requirements are to be submitted in another time)
- How does the email verification process work, we plan to have the user need to verify his account through email for a specific allotted time. Is this okay?
- Would there be a database of up mail accounts given? (to ensure that the given up mail in the sign-up is valid)
- Is a student account required first before one can create an account for the organization?
- Regarding organization activities, do the offices need to be notified about it?
- What are the contents for the organization's profile?
- Is it alright to use a non-relational database for this project?
